## Steven Kazmierczak

Because of my strong interest I keep track of new developments in software and hardware. In my spare time I manage many projects which involve programming and setting up infrastructures of servers and networks. I'm also very familiar with web development. Next to these things I'm very interested in learning new things. I like to annualized problems and find better / more efficient ways to handle them.

### Experience

Oudsbergen  
2013 - Present
